

# LoWatt

## In for the Long Run.

The new LoWatt T-Series fan from Vent-Axia has at least twice the motor life of an ordinary fan, but typically uses only half the energy. It outlasts and outperforms everything else on the market.

What's more, choosing LoWatt is simply better value for money. It means savings on energy bills and reduces the cost of the Climate Change Levy. And naturally, with significantly lower energy usage, it's the environmentally friendly option.

Models are available to suit domestic, commercial and industrial applications. All come with the technological reliability that's built into every Vent-Axia product, meaning lower whole life costs.

The new LoWatt T-Series. Nothing else gets close.

**LoWatt** The longer lasting, low energy fan range.
