

Meetings made easy

Radvision Scopia from G3 Comms

Collaborate anywhere with any device across any multi-vendor infrastructure

Radvision's market-leading voice, data and high definition video conferencing solutions bring a fresh and unique perspective to today's mobile business world. In the office, at home or on the road, with standards-based any device-to-any device interoperability and connectivity, now it's easy to join the conversation wherever you are.

Delivered by award-winning, multi-vendor comms specialists, G3 over any IP, 3G or wireless network infrastructure, Radvision's Scopia high performance room systems, advanced telepresence and desktop communications, and intuitive mobile conferencing solutions simplify and enrich multi-party collaboration, saving time, resource and expense.

With break-through features and intelligent management software, Scopia visual communication solutions are straightforward to deploy across any Mac or PC environment and easily integrate with existing systems and unified communications solutions, including Microsoft Lync. No other system allows you to enjoy the same outstanding user experience from your desktop, laptop, tablet or smartphone.

High value, cost-efficient solutions for every kind of business

Radvision Scopia solutions have unparalleled cost efficiency, flexibility and scalability. With G3's system engineering expertise, solutions can be designed to meet the individual needs of any size of organisation – from the the largest multinational enterprise with the most complex network infrastructure and multi-vendor IT architecture, to smaller businesses with limited technical resource.

With the increasing popularity of BYOD (bring your own device) and development of new, sophisticated unified communications that bring conferencing to desktop and mobile users, Radvision offers the most comprehensive and interoperable platform available for unified visual communications. Our solutions support current business investment in standards-based video conferencing and also provide the flexibility to adopt emerging technologies.

RADVISION[®]
an Avaya company

About Radvision

Founded in 1992, Radvision, an Avaya company, is a leading provider of video conferencing and telepresence technologies over IP and wireless networks. Generally acknowledged as the pioneers of video over IP, most of today's enterprise video networks and video-enabled products and services are based on Radvision's visual communications technologies and products.

In the past, Radvision products have provided the backbone for market-defining solutions from Tandberg, Polycom, Aethra, Cisco, Lifesize and Sony. Today, as the industry leader in interactive voice and video over IP technologies, developer protocol stacks and toolkits, Radvision Scopia solutions offer end-to-end visual communications that help businesses collaborate more efficiently and work more productively.

G3 Comms wins award for Avaya Video Partner 2012

G3 was awarded Avaya Video Partner 2012, after being appointed as the UK's first official Radvision business channel partner.

"Working with the right partners to deliver high performance video at a cost effective price point is essential. G3 has been instrumental in bringing the advantages of our world-class video solutions to a wider audience. Their award is well-deserved."

Nigel Moulton, Director, CTO, EMEA Avaya.

Telepresence solutions

Bringing conferences to life

The Scopia XT Telepresence Platform creates an immersive high definition conferencing experience that's flexible, fully customisable and affordable.

Life-like experience: with state-of-the-art technology supporting full HD video, 48kHz full band audio and up to 1080p60 data sharing, it's as good as being there. True flexibility: tailored to the unique requirements of individual rooms and business needs to deliver optimum quality in any environment.

Market-leading interoperability: combines with Scopia Elite MCU and Scopia TIP Gateway to deliver unrivalled interoperability with Cisco, Tandberg, Logitech, LifeSize and Polycom telepresence systems and any standards-based

video conferencing system for full video, audio and data collaboration.

Intuitive iPad control: Scopia Control Multi-Touch application for iPad makes it easy to initiate calls, control and moderate meetings without any training.

Exceptional value: ground-breaking collaboration capabilities have never been so affordable.

Room solutions

Empowering collaboration

Incorporating the latest video technology, the Scopia XT5000 is the most powerful HD system in its class, while the XT4200 is designed specifically for smaller sized conference rooms.

Scopia XT5000: advanced video conferencing with unique dual 1080p/60fsp live video and content, HD audio, H.264 High Profile, Scalable Video Coding, iPad control and optional embedded multi-party calling.

Scopia XT4200: outstanding value and ideal for smaller room set-ups with dual 720p/60fps live video and content, HD audio, H.264 High Profile, Scalable Video Coding and optional iPad control.

Scopia XT1200: combines cost efficiency and high quality, with dual 1080p/30fps live video and content, CD-quality audio, optional iPad control and an optional embedded MCU supporting continuous presence for up to nine participants.

Scopia XT Meeting Centre: powered by the Scopia XT5000 system, this premium HD system integrates single or dual 55" 1080p premium displays for rapid turnkey implementation.

>>>

Desktop solutions

Your meeting, your way

Scopia Desktop is a simple web browser plug-in that extends a room system video application to Mac and PC users for voice, video and data collaboration. Centrally managed, distributed and deployed without complex licensing fees or installation issues, automatic firewall traversal allows anyone to participate, wherever they are.

Complete flexibility: create virtual conference rooms, connect from anywhere and invite other desktop or mobile users and room systems.

HD video: See up to 28 participants in standards-based video conferences and connect to telepresence and UC clients through the Scopia infrastructure.

Collaboration with review: view shared presentations and review materials without interrupting the presenter.

Control and moderate: view participants list, change video layouts, mute noisy users, control recording and streaming and analyse statistics for troubleshooting.

Embedded firewall and NAT traversal: include remote workers in meetings, participate in video conferences on the go, collaborate with partners and suppliers and seamlessly connect through firewalls without compromising security.

No complicated licensing: simply install the browser plug-in and connect without complex licensing fees or installation issues.

Mobile solutions

Meetings on the move

Available for iPhone, iPad and Android smartphones and tablets, Scopia Mobile is the first standards-based mobile video application to enable HD video conferencing and H.239 data collaboration.

HD video: See up to 28 participants in standards-based video conferences and connect to telepresence and UC clients through the Scopia infrastructure.

Collaboration with review: view shared presentations and review materials without interrupting the presenter.

Control and moderate: view participants list, change video layouts, mute noisy users, control recording and streaming and analyse statistics for troubleshooting.

Easy to join: join conferences through an email link or mobile calendar and invite any attendee through advanced enterprise directory integration.

Connect with Wi-Fi and mobile broadband: video conference through mobile broadband or W-Fi with NetSense bandwidth prediction and adaptation for high quality.

System management

You're in control

Scopia iView Management Suite provides single point access for managing all video conferencing devices including Radvision and third party endpoints, infrastructure devices like MCUs and gateways, and call control applications such as gatekeepers and SIP agents. It's also straightforward to monitor and remotely configure, control and upgrade devices.

iView offers simple scheduling, resource reservation and control, and with the unique Virtual MCU feature for distributed deployments, virtual conference rooms can be created for easy access across the deployment. Tight integration with Microsoft Active Directory, Outlook and Lync or IBM Lotus Domino, Notes and Sametime makes Radvision Scopia the collaboration solution of choice for any organisation.

G3://4D – proactive network management for video collaboration

A 360° system overview

G3 sets the standard in designing, deploying and managing world-class unified communications and video collaboration solutions. Clients trust our forward-looking approach to optimising the lifetime value of their network technology and our ground-breaking communications management suite, G3://4D, provides deep insight into system integrity – before, during and after deployment.

G3://4D Proactive Monitoring is a revolutionary managed service that monitors and assesses the performance and behaviour of converged networks so that any potential issues can be identified and addressed, before they compromise performance and become a business risk. By preventing rather than resolving problems, G3://4D reduces the need for deploying engineering resource and cuts the total cost of service delivery.
